ABSTRACTED-PUB-NO: WO2003069432A

BASIC-ABSTRACT:

NOVELTY - The method involves performing a refueling operation using a fuel dispenser position (12) to define a transaction. The fuel dispenser position generates and wirelessly communicates an electronic transaction receipt to a user device (16). The dispenser position dispenses fuel in accordance with informations from the user device to perform a transaction authorization and payment process.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) a system for diagnosing fuel dispenser
- (b) a fuel dispenser apparatus.

USE - Used for conducting transactions.

ADVANTAGE - The method makes the collection of receipts from each fueling transaction to become easier to organize, thereby allowing customers to have records of the

fueling transaction. The method facilitates reimbursing of fueling transactions in case of misplaced or lost records. The method eliminates keeping inventory for each component and thereby reduces the expense.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of a system facilitating issuance of a virtual refueling transaction.
